

Cloud Native Ninja

Getting Started with Containers

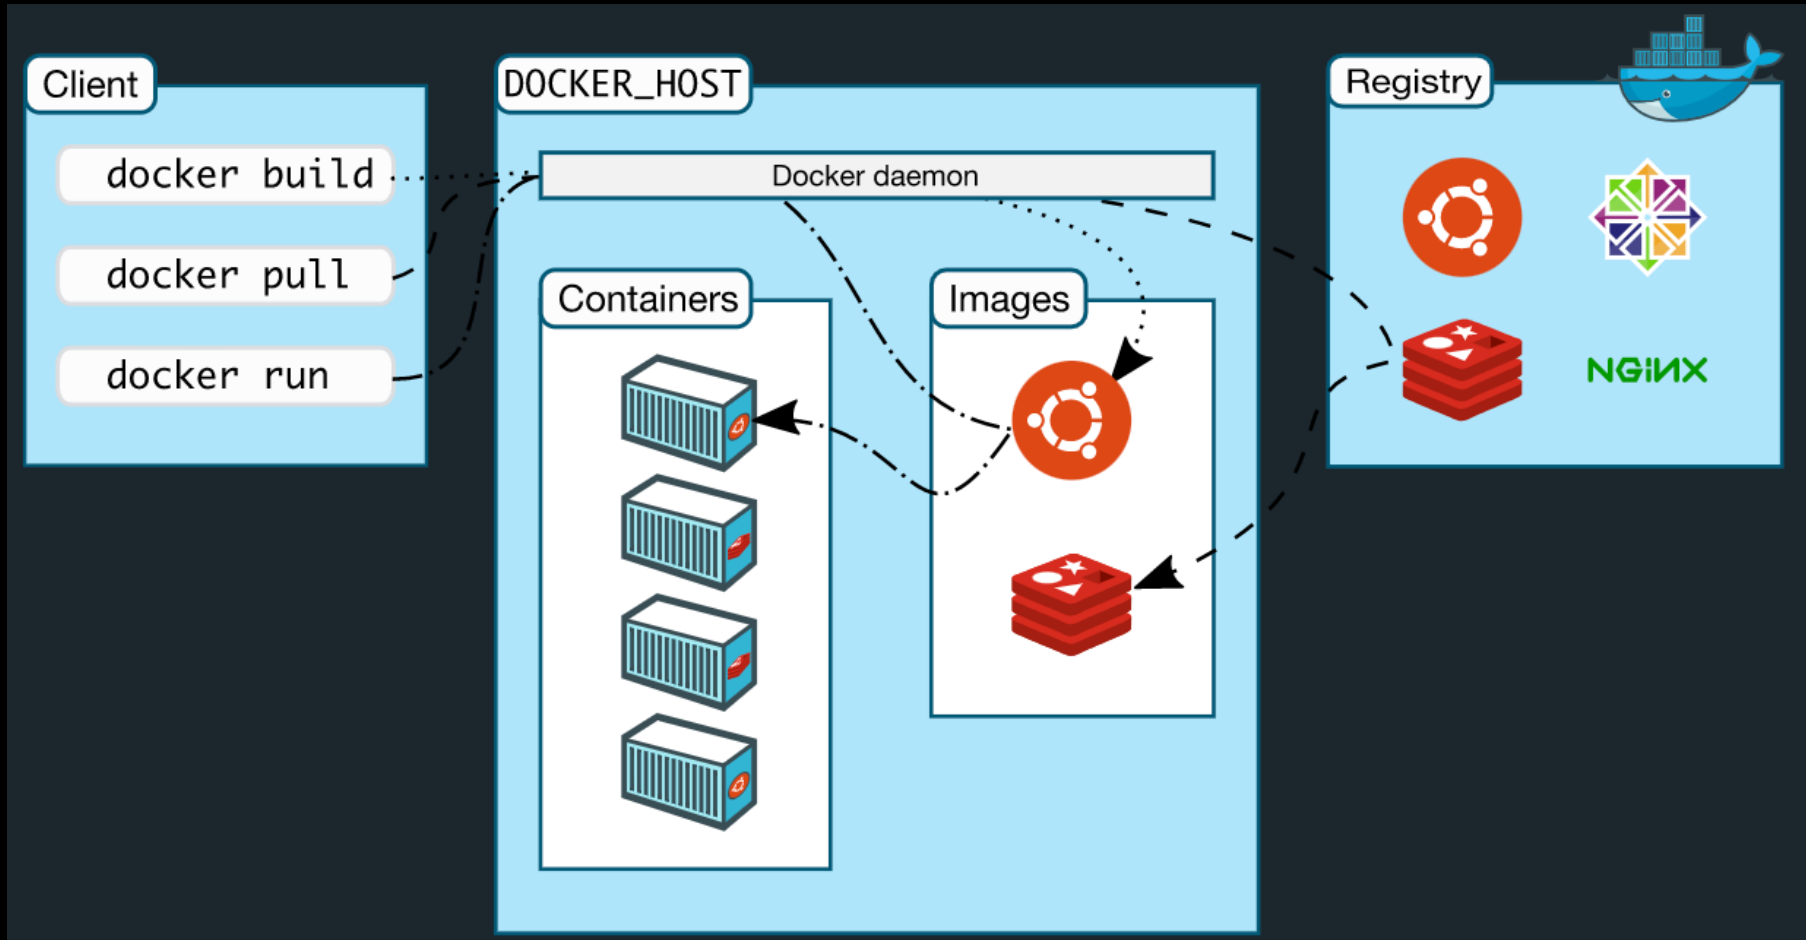

Nilesh Gule @nileshgule

TechTalks Application Architecture

Docker Architecture

RabbitMQ with Docker

Enhancing developer experience / inner loop development with Docker

Docker Desktop

Docker desktop client to interact with Docker daemon

Docker CLI as an alternative for Docker Desktop

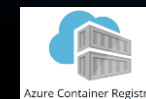

Docker Daemon

Dockerd Listens to API requests and manages images, containers, networks and volumes

Container Registry

Stores container images

Why use Containers

- Consistent development environment for the entire team
- Lightweight
- Rapid performance
- Isolation
- Different versions of Programming languages and software
